pHTP14 Expression Vector

pHTP14 was designed for the cloning and expression of high-levels of recombinant proteins in *Escherichia coli*. Recombinant proteins are expressed in fusion with the ketosteroid isomerase (KSI), which is commonly used to promote solubility and folding of its fusion partners. This vector, included in the portfolio of NZYTech pHTP expression vectors, is part of the NZYEasy Cloning & Expression System. pHTP14 contains two poly-histidine (6xHis) sequences (N- and C-terminal) which allow subsequent recombinant protein purification by immobilized metal ion affinity chromatography (IMAC).

```

✂ Represents the site where the gene will be inserted.

<u>Note</u>: For correct expression, inserted gene needs to be in frame with pHTP14 5' gene sequence. Inserts correctly cloned into pHTP14 will maintain reading frames starting on the ATG codon.
